

## For ECR's and Other Embedded Systems

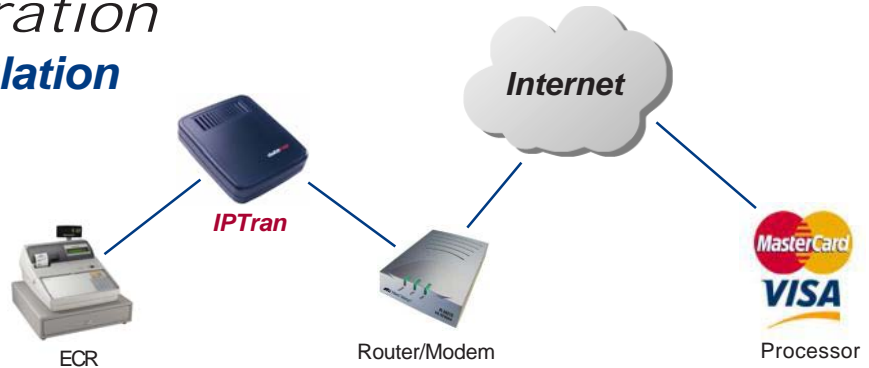

For any ECR with a serial port programmed to use Datacap's proprietary DataTran™ command interface

### IP Only Configuration

#### IPTran™ with DT Emulation

Provides fast transaction processing using a persistent Internet connection.

IPTran connects to ECR serial port and to Internet router or modem. No setup or programming required other than ECR specific requirements. Limited processor support.

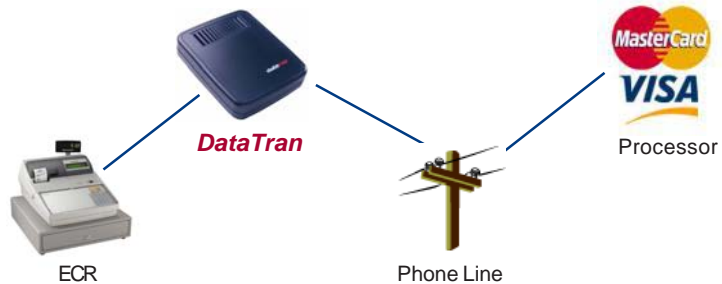

### Dial Only Configuration

#### DataTran™

Provides dial transaction processing through standard phone line.

DataTran connects to ECR serial port and to regular phone jack. Merchant parameters must be obtained from bank or service provider and provided to Datacap for programming. Merchant info can be loaded at the factory or remotely from Datacap servers over the phone.

### IP with Dial Backup Configuration

#### DataTran and IPTran

Provides fast transaction processing using a persistent Internet connection and automatic fail over to dial transactions through standard phone line in the event of an Internet failure.

DataTran connects to ECR serial port and to regular phone jack, IPTran connects to DataTran and Internet router or modem. Merchant parameters must be obtained from bank or service provider and provided to Datacap for programming. Merchant info can be loaded at the factory or remotely from Datacap servers over the phone.
